### Multi-factor Authentication

Use an authenticator app like [1Password](#), [Google Authenticator](#), or [Microsoft Authenticator](#) to generate one-time passwords that are used as a second factor when you sign in to ngrok.

Enable or disable MFA at any time in the User Settings page.

Scan the QR code using your authenticator app

Or enter the code below into the authenticator app

7XKQX34O4MZFE6KL55Z6VDFRXBK6YTIQ

Skip

Next

Device Activation

Enter the code displayed on your device.

Continue

[Back to QR Code](#)

ngrok staff will never ask you to enter a code on this page.

# Welcome to ngrok!

How would you describe yourself?

Select a role

What are you interested in using ngrok for?

- ☐ Testing Webhooks on local
- ☐ Connecting to APIs or databases in your customer' networks
- ☐ Kubernetes Gateway API
- ☐ Sharing local apps without deploying
- ☐ Identity Aware Proxy
- ☐ Kubernetes Ingress
- ☐ IoT Device Connectivity
- ☐ API Gateway
- ☐ My use case isn't here - Custom response

I'm building something else...

# Your Authtoken

This is your personal Authtoken. Use this to authenticate the ngrok agent that you downloaded.

.....  [Copy](#)

## Command Line

Authenticate your ngrok agent. You only have to do this once. The Authtoken is saved in the default configuration file.

 Command Line

[Show Authtoken](#)

```
ngrok config add-authtoken $YOUR_AUTHTOKEN
```

## Configuration File

Alternatively, you can directly add the Authtoken to your `ngrok.yml` configuration file. Use `ngrok config edit` to open the file.

 `ngrok.yml`

[Show Authtoken](#)

```
agent:
  authtoken: <your-authtoken>
```
